# QUICK OVERVIEW

## HOW THE INDICATOR WORKS

A simple breakdown of the AI Liquidity Sweep Signals™ indicator and what it shows on your chart.

### 01 LIQUIDITY ZONES

Marks important liquidity resting above and below price.

### 02 SWEEP DETECTION

Spots when price trades through liquidity and then rejects back.

### 03 SWEEP QUALITY

Shows a simple quality score for the most recent sweep.

### 04 CLEAN STRUCTURE

Keeps the chart readable with useful active levels.

## WHAT THIS INDICATOR HELPS YOU SEE

- Where price may hunt liquidity
- When a sweep rejection forms
- Which side has nearby liquidity
- What the latest sweep looked like

## BEST FOR

**Forex, Gold, Indices, Crypto**
Works across major markets.

**Scalping and Intraday Trading**
Ideal for short to medium timeframes.

**Waiting for Clear Reclaim Moves**
Helps you be more patient and disciplined.

# READING THE CHART

## HOW TO READ LIQUIDITY ZONES AND SWEEP SIGNALS

AI Liquidity Sweep Signals™ By VIP Algos

## 01 LIQUIDITY ZONES

KEY AREAS WHERE PRICE MAY BE ATTRACTED

### LIQUIDITY ABOVE

Levels above price that may attract price and can lead to a sell-side reaction after a sweep.

### LIQUIDITY BELOW

Levels below price that may attract price and can lead to a buy-side reaction after a sweep.

### ACTIVE LEVELS

The indicator keeps important nearby zones visible, showing how many levels are above and below the current price.

## 02 SWEEP SIGNALS

THE CONFIRMATION SIGNALS AFTER A LIQUIDITY PROBE

### BUY SWEEP

Price sweeps below liquidity, rejects, and closes back up.

### SELL SWEEP

Price sweeps above liquidity, rejects, and closes back down.

### LAST SWEEP QUALITY

A simple clarity / confluence score, not a promise or win rate. Higher scores suggest a cleaner and stronger setup.

## 03 SIMPLE READING FLOW

FOLLOW THESE STEPS ON YOUR CHART

1. Mark the nearest liquidity.
2. Wait for price to probe the zone.
3. Look for the reclaim and sweep label.
4. Use the dashboard for context.

**IMPORTANT** | A liquidity zone is **context**. A confirmed sweep label is the **trigger signal**.

# SETTINGS & DASHBOARD

## CUSTOMIZE THE INDICATOR FOR YOUR STYLE

Fine-tune the AI Liquidity Sweep Signals™ indicator to match your trading style and get the most from your analysis.

### INDICATOR EXAMPLE (SETTINGS IN ACTION)

### AI LIQUIDITY SWEEP SIGNALS™

AEDGBP · 30M CHART · VIP ALGOS

● CURRENT STATUS · WAITING FOR SWEEP

| | |
|---|---|
| NEXT LIQUIDITY ABOVE | 0.20082 |
| NEXT LIQUIDITY BELOW | 0.20027 |
| LAST SWEEP | SELL · 8 BARS AGO |
| LAST SWEEP QUALITY | GOOD · 65/100 |
| ACTIVE LEVELS | 3 ABOVE · 1 BELOW |

GOLD = LIQUIDITY LEVEL · GREEN = BUY SWEEP · ORANGE = SELL SWEEP

### CORE SETTINGS

Adjust the key parameters to match your trading style and chart conditions.

| | | |
|---|---|---|
| 01 | Sweep Quality | Responsive, Balanced, Strict. Balanced is recommended. |
| 02 | Liquidity Activity | Clean, Balanced, Active. Controls how much structure is shown. |
| 03 | Swing Strength | Higher values create fewer, stronger levels. |
| 04 | Liquidity Zone Thickness | Adjusts the height of the zone. |
| 05 | Max Active Pools | Controls how many active zones stay visible. |

### SWEEP ENGINE

Configure how sweep detection and zone management behaves.

| | | |
|---|---|---|
| 01 | Maximum Sweep Penetration | Filters overextended moves. |
| 02 | Broken Liquidity Action | Remove or Fade. |
| 03 | After Sweep Action | Fade or Remove. |
| 04 | Signal History | Controls how many historical sweep labels remain visible. |

### DASHBOARD BREAKDOWN

Understand what each dashboard value means.

| | |
|---|---|
| Current Status | Shows the indicator's current state (Waiting for Sweep, Monitoring, etc.). |
| Next Liquidity Above | The next detected liquidity level above current price. |
| Next Liquidity Below | The next detected liquidity level below current price. |
| Last Sweep | Shows the most recent sweep type and how many bars ago it occurred. |
| Last Sweep Quality | Displays the quality score of the last sweep (e.g. Good, Strong, Excellent). |
| Active Levels | Total number of active liquidity levels currently visible (above and below). |

### RECOMMENDED STARTING SETUP

A solid starting point for most traders.

- ✓ Sweep Quality: Balanced
- ✓ Liquidity Activity: Balanced
- ✓ Keep dashboard on
- ✓ Start with the default settings

**TIP** You can always fine-tune these settings later as you get familiar with the indicator and develop your own trading style.

BY VIP ALGOS

# ALERTS & WORKFLOW

A SIMPLE WAY TO USE THE INDICATOR

## 01 ALERTS

STAY INFORMED. TRADE MORE CONFIDENTLY.

### SWEEP ALERTS

Get notified when a confirmed BUY SWEEP or SELL SWEEP occurs.

### NEW LIQUIDITY ALERTS

Optionally enable alerts when new liquidity zones are detected above or below price.

### BROKEN LIQUIDITY ALERTS

Optionally enable alerts when a liquidity level is broken (taken) after price trades through it.

**ONCE PER BAR CLOSE** | "Once Per Bar Close" is the cleanest alert style, helping to reduce false alerts and ensuring confirmed signals.

## 02 SUGGESTED WORKFLOW

A CLEAR PROCESS FROM ANALYSIS TO EXECUTION.

1. Start with the nearest liquidity above and below price.
2. Wait for price to trade into a liquidity zone.
3. Look for a confirmed ▲ BUY SWEEP or ▼ SELL SWEEP label.
4. Use the dashboard to review current status, last sweep, and active levels.
5. Combine with your own trade plan, stop-loss and risk management.

## 03 BEST PRACTICES

BUILD BETTER HABITS. TRADE WITH DISCIPLINE.

- Wait for confirmed closes.
- Avoid forcing trades between levels.
- Respect higher-timeframe context.
- Use the indicator as a decision-support tool, not a standalone system.
- Keep position risk controlled.

**KEY IDEA**

Liquidity shows **where price may react.**
A confirmed sweep shows **when rejection has already appeared.**
