# AI BUY & SELL ZONES

## QUICK OVERVIEW

AI-powered zone mapping helps identify active buy and sell areas using price structure, reaction history, and adaptive zone clustering.

Cyan zones mark potential buy areas, while purple zones mark potential sell areas.

The smart dashboard shows live price, the nearest buy zone, the nearest sell zone, and how many active zones are on the chart.

Built-in zone labels and alerts help traders monitor important chart areas in a simpler, more structured way.

This indicator is designed to make zone-based chart analysis easier to read across all timeframes.

Educational use only • Trading involves risk • Use your own judgement

# UNDERSTANDING BUY ZONES

HOW TO READ DEMAND AREAS

01

Buy zones highlight areas where price may find **demand or support**.

02

When price approaches a buy zone, traders can **review how price reacts** around that area instead of chasing movement in the middle of the chart.

03

Closer buy zones can act as **early reaction areas**, while deeper zones may show **stronger pullback locations**.

04

The **buy-zone alert** helps keep your attention on important levels without overcomplicating the chart.

## BEST PRACTICE

For extra clarity, combine the zone with **market structure, trend direction, and candle behavior**.

# UNDERSTANDING SELL ZONES

HOW TO READ SUPPLY AREAS

01

Sell zones highlight areas where price may face supply or resistance.

02

When price moves into a sell zone, traders can review whether momentum is slowing or whether the level is acting as a rejection area.

03

Higher sell zones can represent larger overhead areas, while closer sell zones can help track short-term reaction points.

04

The sell-zone alert keeps key chart levels easy to follow so users can stay organized.

Zone-based analysis is often easier to understand when the market is moving back into clearly marked areas.

# SMART DASHBOARD & ALERTS

CLEAR CONTEXT AT A GLANCE

| Dashboard   | LIVE                       |
|-------------|----------------------------|
| Live Price: | 1.33968                    |
| ▲ Buy Zone  | 1.33907                    |
| ▼ Sell Zone | 1.34025                    |
| Zones       | ● Buy Zone 2 ● Sell Zone 3 |

01

Live Price shows the current market level in real time.

02

Buy Zone and Sell Zone fields display the nearest active levels for quick reference.

03

The zone counter shows how many buy and sell areas are currently active on the chart.

04

Zone labels such as 'BUY WHEN PRICE HITS HERE' and 'SELL WHEN PRICE HITS HERE' make the chart easier to follow.

05

Alerts help users stay aware of important areas without watching every candle.

The dashboard is designed to keep the indicator simple, visual, and easy to understand.
