VIP ALGOS

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Market Prediction Indicator™

A simple visual guide to using chart-based future-path projections, trend context, and structured market planning.

Visual projection

See potential future paths projected directly on the chart for instant clarity.

Trend context

Understand the prevailing trend with clear bullish or bearish context.

Structured planning

Use projections and trend context to plan entries, exits, and risk effectively.

How Market Prediction Indicator™ Works

The indicator combines live market data, a projected path, and trend context to help traders review possible market direction.

1 Live market data

Real-time price action from the market.

2 Divider line

Clearly separates historical data from the projected path.

5 Trend box

Shows the current trend context at a glance.

3 Dotted future path

The projected path shows a possible future scenario.

4 Green & red path phases

Green = bullish phase

Red = bearish phase

TIP | Review the chart as one complete picture, not just one small section.

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Step 1: Read the projection path

Start by separating the live chart on the left from the projected outcome on the right.

1 Locate the divider

Find the vertical divider that separates historical price action (left) from the projected outcome (right).

2 Review the first projected move

Observe the initial projected move right after the divider to understand the early direction bias.

3 Watch the path sequence

Follow the sequence of swings to see how the projection maps potential ups and downs.

4 Combine it with your own market view

Use the projection alongside trend context, key levels, and your analysis to make more informed decisions.

The projected path can help you review direction, swings, and momentum changes in a more visual way.

VIP ALGOS

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Step 2: Review the trend context

Use the trend box together with the projected path to understand the broader directional bias.

Trend box = broader direction

The trend box shows the indicated directional bias (bullish or bearish).

Bearish or bullish context

It sets the overall context for how the projected path should be interpreted.

Use with live price action

Combine the trend box and projected path with what price is doing now.

Keep your own risk management

The indicator does not provide entries, exits, or risk management.

TIP: Trend context helps give the projected path more structure.

VIP ALGOS

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Step 3: Review possible swing areas

The projection path can help you review potential turns, pauses, and continuation zones.

Upswing

Identify potential pushes higher where momentum may build.

Pullback

Spot possible retracements or pauses within the larger move.

Continuation

Look for follow-through zones where the trend may extend after a pause.

Reaction area

Highlight areas where price may react, reverse, or consolidate.

Focus on the sequence of movement, not just one exact dot.

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Step 4: Use the indicator with more structure

Use the projected path as a planning tool alongside chart structure, not as a standalone decision.

1. Review market structure

Identify key highs, lows, support, and resistance.

2. Check current trend

Confirm the overall direction and market context.

3. Read the projected path

Understand the predicted swings and potential direction.

4. Compare projected swings with live price action

Look for alignment, reaction, or divergence.

5. Use your own judgement

Make decisions based on your experience, risk, and plan.

A **cleaner routine** can help make the chart easier to review.

VIP ALGOS

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Markets, time frames & simple rules

Market Prediction Indicator™ can be reviewed across multiple TradingView and MetaTrader (MT5/MT4) markets and time frames.

All markets

Works across crypto, forex, stocks, indices, and more.

Any time frame

Use on any TradingView and MetaTrader (MT5/MT4) time frame you prefer.

Simple visual layout

Clean chart design shows what matters at a glance.

Clear trend context

Built-in trend box adds quick bullish or bearish context.

Simple rules

- Add the indicator to your TradingView and MetaTrader (MT5/MT4) chart
- Review the live chart first
- Read the projected path second
- Use the trend box as added context
- Keep your own risk management in place

VIP ALGOS MARKET PREDICTION INDICATOR GUIDE

Keep it simple

A clean routine can help you use Market Prediction Indicator™ more effectively.

1 Review the live trend
Understand the current price direction.

2 Locate the divider line
Identify the point where projection begins.

3 Read the projected path
Assess the future price path shown.

4 Watch the swing sequence
Note the highs and lows in the projection.

5 Check the trend box
Confirm the directional bias in the top-right.

6 Use your own market judgement
Combine the projection with your analysis and risk management.

Clear projection. Clear context. A cleaner chart workflow.
