HOW SUPPORT & RESISTANCE MATRIX™ WORKS

This indicator maps support and resistance zones directly on the chart
to help traders review market structure and possible reaction areas more clearly.

1. GREEN SUPPORT ZONES

Green zones highlight areas where price has previously found support and may react again.

2. RED RESISTANCE ZONES

Red zones highlight areas where price has previously faced rejection and may react again.

3. TREND BOX

The trend box shows the current market bias (Bullish or Bearish) to help align your analysis.

4. PRICE STRUCTURE

Zones are placed based on recent market structure, swing points, and reaction history.

5. CLEANER CHART CONTEXT

Focus on key zones that matter most for decision-making and trade planning.

VIP ALGOS

STEP 1: READ THE ZONES

GREEN ZONES = SUPPORT

Potential support areas where price has previously reacted.

RED ZONES = RESISTANCE

Potential resistance areas where price has previously faced selling pressure.

1 HISTORICAL REACTIONS

Price has bounced multiple times from this support zone, showing buyer interest.

2 STRONGER SUPPORT

This major support zone has held firm in the past and attracted strong buying pressure.

3 KEY RESISTANCE

Price has been rejected from this resistance zone several times before.

4 MID-LEVEL RESISTANCE

This area acted as resistance before and may cause selling pressure again.

TAKEAWAY

SUPPORT BELOW. RESISTANCE ABOVE. CONTEXT MATTERS.

STEP 2:
THICKER VS THINNER LEVELS

Support and resistance zones aren't all equal. The **thickness of a zone** can give you insight into how strong, established, or significant that level may be.

STRONGER ZONES

Thicker or wider zones often represent areas where price has reacted multiple times in the past. These zones tend to carry more weight.

LIGHTER ZONES

Thinner or narrower zones are typically less tested and may break more easily. Use caution with thinner levels.

HISTORICAL REACTION

Zones form stronger when price has reacted from them multiple times across different swings or timeframes.

USE WITH CONTEXT

Combine zone thickness with trend, structure, and market context for higher-probability decisions.

TIP: THICKER DOES NOT MEAN GUARANTEED — IT MEANS **HIGHER VISUAL SIGNIFICANCE.**

STEP 3: REVIEW TREND & STRUCTURE

Zones become more useful when reviewed together with market direction and nearby structure. This helps you understand the bigger picture before planning high-probability trades.

Use the TREND box as a quick reference for overall market direction.

Beyond zones, review key structural elements to confirm context:

CHECK TREND CONTEXT

- Use the trend box to identify overall direction.
- Align your bias with the higher probability side of the market.

REVIEW NEARBY HIGHS/LOWS

- Identify recent swing highs and swing lows around your zones.
- These levels often act as magnets.

WATCH REACTION AREAS

- Observe how price reacts to zones.
- Look for rejection, hesitation, or strong continuation.

STAY AWARE OF BREAKS

- A clean break of a key zone or structure can change the outlook.
- Be ready to adjust your plan.

KEEP YOUR OWN RISK MANAGEMENT

- No tool is perfect.
- Always use proper position sizing, stops, and risk control.
- Protect your capital.

ZONES WORK BEST AS PART OF A COMPLETE CHART REVIEW.

STEP 4: REVIEW BOUNCES, BREAKS & RETESTS

When price approaches a support or resistance zone, traders often review whether price **bounces** away, **breaks** through, or returns to **retest** the area.

1 BOUNCE FROM SUPPORT

Price approaches a support zone and reacts higher. This shows buyers stepping in, respecting the area.

2 BREAK THROUGH A ZONE

Price closes below support or above resistance with momentum. This can signal a shift in market structure.

3 RETEST AFTER A BREAK

After a break, price may return to the zone to test it from the other side before continuing in the new direction.

TIP: Use the zones as visual reference areas, not as standalone decisions.

BEST WAYS TO USE THE MATRIX

START WITH THE MAIN ZONES

Focus on the key support and resistance zones first. These areas show where price has reacted the most.

CHECK THE LARGER TREND

Understand the overall trend before looking for setups. Trade in the direction of strength, not against it.

REVIEW RECENT REACTIONS

Look at how price has reacted at each zone. History doesn't guarantee future results, but it provides valuable context.

COMPARE MULTIPLE TIMEFRAMES

Use higher timeframes for direction and lower timeframes for timing. Alignment increases clarity.

KEEP YOUR CHART PROCESS SIMPLE

Avoid clutter. Let the matrix highlight the important areas so you can stay focused and make clearer decisions.

USE YOUR OWN JUDGEMENT

The Matrix is a tool, not a signal. Always combine it with your analysis, risk management, and trading plan.

KEEP IT SIMPLE

Support & Resistance Matrix™ is designed to help traders review structure, important chart zones, and market context in one cleaner TradingView and MetaTrader (MT5/MT4) workflow.

- Review support and resistance first
- Notice thicker and thinner zones
- Use trend and structure for context
- Stay aware of bounces, breaks and retests
- Keep your own risk management

CLEARER ZONES. CLEANER STRUCTURE. A SMARTER CHART WORKFLOW.
