UNDERSTANDING ORDER BLOCKS

AI Order Block & Fair Value Gap Zones™

Order Blocks are confirmed price-action zones that can mark areas where the market previously showed strong directional intent.

BULLISH EXAMPLE

BEARISH EXAMPLE

01 CONFIRMED STRUCTURE

Order Blocks are built after a confirmed structure break or strong displacement move.

02 BULLISH ORDER BLOCK

A demand-style zone that can act as a future support area.

03 BEARISH ORDER BLOCK

A supply-style zone that can act as a future resistance area.

04 ZONE METHOD

Use Body + Wick for tighter zones or Full Candle for broader zones.

05 INVALIDATION

Close waits for candle close beyond the zone. Wick removes the zone as soon as price trades through it.

ORDER BLOCK SETTINGS

Show Order Blocks	ON
Order Block Candle Search	20
Body + Wick / Full Candle	Body + Wick
Tighten Extreme Oversized OBs	ON
Order Block Invalidation	Wick

QUALITY MODES

- **Responsive** = more zones
- **Balanced** = recommended
- **Strict** = more selective

HOW TO USE

Use Order Blocks as areas of interest, then wait for price action confirmation before making a decision.

FAIR VALUE GAPS & CONFLUENCE

AI Order Block & Fair Value Gap Zones™

BULLISH FAIR VALUE GAP (FVG)

A 3-candle bullish FVG showing an upside imbalance. This area below price may act as support if revisited.

BEARISH FAIR VALUE GAP (FVG)

A 3-candle bearish FVG showing a downside imbalance. This area above price may act as resistance if revisited.

ORDER BLOCK + FVG CONFLUENCE

An Order Block and Fair Value Gap overlapping on the same side can create a stronger area of interest.

Fair Value Gaps are 3-candle imbalances that highlight areas where price moved quickly and may later revisit that zone.

BULLISH FVG

Forms when upside imbalance leaves an area below price that may act as support.

BEARISH FVG

Forms when downside imbalance leaves an area above price that may act as resistance.

DISPLACEMENT FILTER

You can require a strong middle candle for cleaner FVG signals.

FILLED METHOD

Full Fill keeps the gap active until the far edge is reached. Midpoint treats 50% fill as enough.

CONFLUENCE

When an Order Block overlaps a Fair Value Gap on the same side, the zone can become a stronger area of interest.

ZONE LEGEND

- Solid = Order Block
- Dashed = Fair Value Gap
- Gold = OB + FVG Overlap

FVG SETTINGS

- Show Fair Value Gaps
- Require Displacement Candle
- Full Fill / Midpoint
- Filter Extreme Oversized FVGs

NOTE

Confluence can help you focus on higher-quality zones, but it is still best used with confirmation and risk control.

DASHBOARD & CORE FEATURES

AI Order Block & Fair Value Gap Zones™

CORE SETTINGS

Customize the indicator to match your trading style and market conditions.

Zone Quality	Responsive / Balanced / Strict	Extend Zones Forward	On / Off
Zone Activity	Clean / Balanced / Active	Max Zones Per Type / Side	1 – 10
Structure Strength	Normal (1–5)	Auto-Clean Distant Zones	On / Off

ⓘ Balanced settings are a strong starting point for most traders.

AI The dashboard gives you fast context on current area, directional bias, nearest zones and active zone counts.

CURRENT AREA
Shows whether price is inside a zone or between zones.

MARKET BIAS
Displays the current bullish or bearish directional bias.

NEXT BUY ZONE
Shows the nearest bullish Order Block or Fair Value Gap being tracked below price.

NEXT SELL ZONE
Shows the nearest bearish Order Block or Fair Value Gap being tracked above price.

ZONE OVERLAP
Highlights when Order Blocks and Fair Value Gaps overlap on the same side.

BUY ZONES / SELL ZONES
Counts how many active Order Blocks and Fair Value Gaps are currently on the chart.

ZONE TYPE LEGEND
SOLID = ORDER BLOCK • DASHED = FAIR VALUE GAP • GOLD = ZONE OVERLAP

ALERTS, WORKFLOW & BEST USE

AI Order Block & Fair Value Gap Zones™

This indicator is designed to help you follow confirmed zones more efficiently across different markets and timeframes.

SIMPLE WORKFLOW

01 Start with Market Bias and Current Area.

02 Mark the Next Buy Zone and Next Sell Zone.

03 Wait for price to approach or enter a zone.

04 Give extra attention to gold confluence areas.

05 Use your own entry confirmation and risk management plan.

ALERTS

New Zone Alerts
Trigger when a new confirmed Order Block or Fair Value Gap appears.

Zone Touch Alerts
Trigger when price enters an active zone for the first time.

Confluence Alerts
Trigger when price enters an overlapping OB + FVG area.

Dynamic Phone Alerts
Use one TradingView alert with Any alert() function call for live zone messages.

Alert Frequency
Choose Once Per Bar or Once Per Bar Close.

BEST USE

- Works across forex, indices, crypto and commodities
- Useful on lower and higher timeframes
- Balanced mode is a practical default
- Remove keeps the cleanest chart, Fade keeps subtle history

REMEMBER

Zones are tools for context, not guarantees.
Combine them with confirmation, discipline and sensible risk control.
