VIP ALGOS

AI SUPPLY & DEMAND ZONES

QUICK OVERVIEW

AI-POWERED ZONE MAPPING

Helps identify active supply and demand areas using confirmed swing structure and displacement away from price.

SUPPLY ZONES (ROSE-RED)

Mark potential sell or resistance reaction areas where price may face selling pressure.

DEMAND ZONES (TEAL)

Mark potential buy or support reaction areas where price may find buying interest.

TOUCHED vs UNTOUCHED

UNTOUCHED means price has not returned to the zone since confirmation, while TOUCHED means price has already revisited the zone.

ZONE STRENGTH

Helps rank zone clarity and confluence based on structure and context, but it is not a win-rate probability.

This indicator is designed to make zone-based chart analysis easier to read across all timeframes.

VIP ALGOS

DASHBOARD & CORE FEATURES

UNDERSTAND WHAT EACH DASHBOARD ITEM MEANS AND HOW IT HELPS YOU TRADE WITH CONFIDENCE.

CURRENT STATUS

Shows whether price is currently in a supply zone, in a demand zone, or between zones.

NEAREST SUPPLY

Shows the closest active supply area above current price, including the price level and strength.

NEAREST DEMAND

Shows the closest active demand area below current price, including the price level and strength.

LAST TOUCH

Shows which zone type was most recently touched (supply or demand) and how many bars ago.

ZONE STRENGTH

Displays the current clarity/confluence score of the highlighted zone. Repeated retests can weaken the displayed strength.

ACTIVE ZONES / UNTOUCHED ZONES

Shows how many supply and demand zones are currently active and how many remain untouched.

VIP ALGOS

SETTINGS & CUSTOMIZATION

FINE-TUNE YOUR TRADING EDGE

CUSTOM SETTINGS FOR YOUR TRADING STYLE

Adjust the indicator to match your market style and preferences. These settings give you full control over how zones are detected, displayed, and managed on your chart.

01 ZONE SELECTIVITY

Controls how strictly zones are detected based on market structure and rules.

Responsive | **Balanced** | Strict

Recommended starting mode.

02 ZONE ACTIVITY

Controls how much structure is shown on your chart.

Clean | **Balanced** | Active

03 SWING STRENGTH

Sets how strong a confirmed swing must be before it can create a zone.

5

04 ZONE THICKNESS ATR

Controls the depth (thickness) of each zone using ATR.

1.0

05 MERGE NEARBY ZONES ATR

Can combine close same-side zones into cleaner, fewer levels.

2.0

06 MAX ACTIVE ZONES PER SIDE

Controls how many supply and demand zones remain visible on the chart.

3

07 EXTEND ZONES FORWARD

Controls how far zones project into the future.

300

08 AUTO-CLEAN DISTANT ZONES

Helps remove old zones that move far away from current price.

Off | **On**

BEST PRACTICE

Start with *Balanced* settings, then adjust selectivity and activity only after you understand how much structure you want to see.

BEST WORKFLOW & ALERTS

USER GUIDE

STEP-BY-STEP WORKFLOW

A SIMPLE PROCESS FOR MORE CONFIDENT ANALYSIS

01 **Identify the nearest supply and demand zones.**
Look for the closest zones above and below current price on the chart.

02 **Check whether price is in a zone or between zones.**
Understand the current location of price relative to the zones.

03 **Give extra attention to untouched and stronger zones first.**
Prioritize zones that are untouched and have higher strength ratings.

04 **Wait for price reaction or confirmation before acting.**
Look for clear price reaction, confirmation, or your preferred setup. Do not treat every zone as an automatic entry.

05 **Use the dashboard for context and manage risk with your own plan.**
Check the dashboard for nearest zones, strength, and status, and always use proper risk management.

ALERTS & NOTIFICATIONS

STAY INFORMED. TRADE SMARTER.

Alert When Price Enters Zone
Get an alert when price enters any supply or demand zone. Useful for spotting potential opportunities as price reaches key areas.

Alert On New Zones
Be notified when new supply or demand zones are detected and drawn on the chart. Helps you stay up to date with the latest zone analysis.

Alert When Zone Breaks
Get an alert when an existing zone is broken. This can help you identify when a zone is no longer valid and may signal a shift in market structure.

Use One TradingView and MetaTrader (MT5/MT4) Alert for Confirmed Messages
In TradingView and MetaTrader (MT5/MT4), create a single alert and set the condition to "Any alert() function call". This will receive all VIP Algos alert messages, including zone entries, new zones, and zone breaks.

BONUS BEST PRACTICE

Higher timeframes can provide broader context, while lower timeframes can help refine execution.
Use multiple timeframes together to get a clearer view of the bigger picture and more precise entry timing.
